

## HPV Vac

During Sprint 3, Orlena Phung made solid progress on the mobile app:

- Developed a home view specifically optimized for mobile devices.
- Implemented a sign-up view with fully functional login capabilities.
- The upload profile feature is in place but still requires optimization.
- Plans to include pixel art-based avatar creation in future sprints.
  - I provided feedback on starting with a simple version of the avatar creation tool.
- Added a leaderboard that displays other users based on their module scores.
- Built module lessons that include quiz-style questions related to different classes.
- [cphung@memphis.edu](mailto:cphung@memphis.edu)

Overall, Orlena is making good progress and laying a solid foundation for the app's interactive features.

Orlena Phung gives feedback for Nacim Mohamed Osmen from team “Leap Frog”

In Sprint 3:

- Implement dark mode
  - Toggle option
    - CNN model
    - YOLO model
      - Tried but may not able to implement due to time constraint
      - Required to teach the model: manual data input
  - Add batch capability to import a folder of images to model
    - At the moment, manually input the folder’s path
    - Output a statistic of number of frog images vs everything else
- In Sprint 4:
- Add an “Add Folder” button to improve UX in the batch section
  - Combine the model with existing UI/UX
  - Give a save option for statistic output
